EXPERIENCE

ASDN Cybernetics May 2026 – Jul 2026
AI/ML and Automation Intern

- Developed an interactive **Student Analytics Dashboard** using **PHP** and **Chart.js** to visualize student burnout metrics, academic performance trends, and an integrated event calendar.
- Built a **student support chatbot** capable of handling data-related, navigation, and general queries, providing an interactive interface for accessing information.

PROJECTS

Ecommerce Customer Support Agent (Agentic AI)
- Developed an **LLM-powered AI agent** using **Langchain & LangGraph** for web search, UI queries, product discovery, product details, and order tracking, enabling contextual responses and task-oriented customer support. Added Monitoring and Evaluation using **LangFuse**.
- Integrated **Retrieval-Augmented Generation (RAG)** for UI queries and **Tabular-Augmented Generation (TAG)** for product queries using **Qdrant vector search**, **MariaDB**, and SQL.
- **Achieved Argument Correctness 86%, Groundedness 74%, p50 Tool Latency 206.8ms, Tool Selection Accuracy 66%.**
- Focused on modular agent workflows, tool integration, retrieval quality, and maintainable backend architecture for AI-powered customer support.
  Technologies: Python, FastAPI, Agentic AI, LLMs, RAG, TAG, Tool Calling, Prompt Engineering, SQL, Qdrant, MariaDB

Traffic Sign Classification Using CNN (Computer Vision)
- Designed and trained a custom **Convolutional Neural Network (CNN)** inspired by **GoogLeNet Inception** principles to classify traffic signs across **43 categories**, incorporating image preprocessing, augmentation, and class weighting to address class imbalance.
- Evaluated model performance using multiple metrics, achieving **70.48% accuracy**, **73.52% F1-score**, and **94.41% Top-5 accuracy**, supporting comparative analysis of classification performance.
  Technologies: Python, TensorFlow, CNN, GoogLeNet Inception, Deep Learning, Computer Vision, Image Preprocessing, Data Augmentation, Model Evaluation

AI-Powered YouTube Comment Analysis System (NLP)
- Developed an end-to-end **AI-powered analytics platform** using **BERTopic**, text embeddings, **UMAP**, and **HDBSCAN** to identify semantic topics and discussion trends in YouTube comments, with a local **LLM** for topic labeling across Hindi, English, and Hinglish.
- Built a **FastAPI** backend and interactive **Streamlit** dashboard integrating Plotly, Pyplot, and WordCloud for topic exploration, KPI visualization, and trend analysis, enabling structured insights from unstructured text data.
  Technologies: Python, NLP, LLMs, BERTopic, Embeddings, UMAP, HDBSCAN, Ollama, Pandas, Plotly, Pyplot, Streamlit, FastAPI, Data Visualization

SKILLS

- **Programming:** Python, SQL, JavaScript, PHP
- **Backend Development:** FastAPI, REST APIs, API Integration
- **Frontend Development:** React, HTML, CSS, JavaScript
- **Databases:** MariaDB, SQL, Qdrant, ChromaDB, Vector Search
- **AI Application Development:** LLMs, Agentic AI, RAG, TAG, Tool Calling, Prompt Engineering
- **AI Frameworks:** LangChain, LangGraph
- **ML & Data Processing:** PyTorch, TensorFlow, Scikit-Learn, Pandas, NumPy
- **Developer Tools:** Git, GitHub, VS Code, Antigravity, Codex
- **Core Competencies:** Data Structures and Algorithms, Debugging, Problem Solving, API Design

OBJECTIVE

CS Undergrad with strong fundamentals in **AI/ML and Software Development**, with hands-on experience building **AI agents, RAG pipelines, Dashboards and Python backend services**. Interested in developing reliable AI applications through experimentation, prompt engineering, model evaluation, and agent orchestration to solve real-world problems.

EDUCATION

Poornima University 2023–2027
B.Tech in Computer Science and Engineering
CGPA: 7.3/10

CBSE 2023
Class XII – 84.4%

CERTIFICATIONS

- Introduction to Programming in C – NPTEL (IIT Kanpur)
- GCP – Associate Data Practitioner (ADP)
